

## Day-2

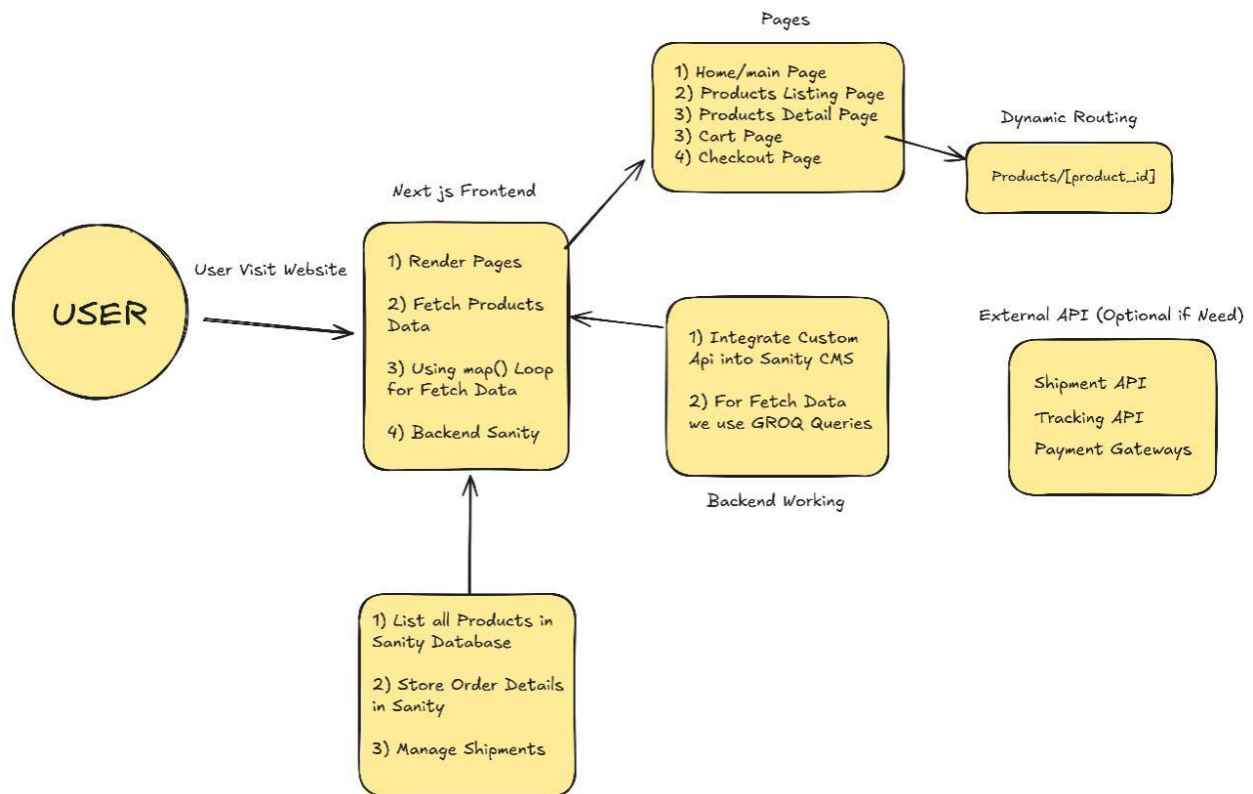

### Working Marketplace E-commerce builder

#### Overview

My Project is e-commerce website the niche of this site is selling furniture like sofas and chairs

#### Working

In this project we use **Next.js** the powerful framework of react and **Tailwind CSS** for styling also use headless CMS name **Sanity** as a Database and Backend

#### Tools

1. Next.js
2. Tailwind CSS
3. Sanity

#### Details About Migrate and Fetch data

In this project we use sanity as a backend so first we migrate the Api data into Sanity Studio using Script Code and .env.local file then we use GROQ queries for testing data and now we fetch the data on frontend using Sanity Client
